Professional Summary

DevOps Engineer with 2+ years of hands-on experience managing Kubernetes clusters with services, and CI/CD pipelines serving developers across two concurrent products in different domains. Led on-prem to cloud migrations on AWS, modernized legacy application stacks with Docker and Kubernetes, and drove SCM migration from Bitbucket to GitHub. Skilled in Infrastructure as Code (Terraform, CloudFormation), container orchestration (Docker, Kubernetes/EKS), GitOps (ArgoCD, Helm), and observability (Prometheus, Grafana, ELK Stack). Track record of reducing deployment times and optimizing cloud costs through autoscaling, right-sizing, and governance policies. Currently handling DevOps operations for an enterprise mobility platform and a fleet management product simultaneously.

Technical Skills

- **Cloud Platforms:** AWS (primary - EC2, S3, Lambda, EKS, RDS, Route 53, CloudWatch, IAM, KMS), Azure, GCP
- **Infrastructure as Code:** Terraform (modules, remote state), Ansible, CloudFormation (nested stacks)
- **Containerization & Orchestration:** Docker (multi-stage builds), Kubernetes (EKS), Helm, ArgoCD, Karpenter
- **CI/CD & Automation:** Jenkins (shared libraries), GitHub Actions (reusable workflows, OIDC), Bitbucket Pipelines, Bitrise, AWS CodePipeline
- **Monitoring & Logging:** AWS CloudWatch, Prometheus (custom exporters), Grafana (dashboards, alerting), ELK Stack, Graylog, Loki, OpenSearch
- **Programming & Scripting:** Bash, Python, Golang, Shell
- **Databases & Caching:** MySQL, MongoDB, Redis, Microsoft SQL Server (SSMS), AWS RDS
- **Networking & Security:** VPC (subnets, NAT, IGW), ALB/NLB, DNS, SSL/TLS, IAM, KMS, Nginx, Traefik, Cert Manager
- **Operating Systems:** Linux (Ubuntu, RHEL, CentOS), macOS, Windows Server
- **GenAI & Developer Tools:** Factory.ai, Augment, Claude, Gemini, Warp Terminal

Professional Experience

AssuredTechmatics (formerly Assured Tracking Inc)
DevOps Engineer

Hyderabad, Telangana, India / USA
04/2024 - Present

AssuredTechmatics builds **Apollo ELD**, a driver-friendly Electronic Logging Device solution for fleet safety and compliance. The product focuses on integrated fleet management, regulatory compliance, and operational reliability for trucking businesses.

- **Cloud Migration & Modernization:** Migrated legacy on-prem workloads to AWS, containerized the application stack with Docker, and transitioned deployments to Amazon EKS with Helm-based releases and zero-downtime rollbacks - reducing deployment time by 50% and improving scalability across environments.
- **Cloud Infrastructure:** Provisioned and operated AWS infrastructure across Linux and Windows servers using Terraform and modular CloudFormation templates, supporting 10+ services in production.
- **New Infrastructure Development:** Designed and provisioned infrastructure for new services and features end-to-end - spinning up EC2 instances, configuring security groups, setting up load balancers, creating EKS namespaces, and deploying Helm charts for new microservices as the product evolved.
- **CI/CD & Mobile Builds:** Built CI/CD pipelines using GitHub Actions for backend services and Bitrise for Android/iOS builds, enabling faster release cycles for developers.
- **Production Deployments & Release Management:** Managed production releases and rollbacks across multiple environments (dev, staging, production). Coordinated deployment windows with development teams and performed blue-green deployments to minimize downtime.
- **Monitoring & Incident Response:** Established full observability stack with Prometheus, Grafana, and centralized logging (Loki, Graylog), reducing mean time to resolution for production incidents. Maintained Graylog instances for log retention, stream configuration, and alert rules for production anomalies.
- **Environment Management:** Provisioned and maintained isolated development, staging, QA, and production environments on AWS. Ensured environment parity through consistent Terraform modules and Docker image tagging strategies.
- **Security, Database & Compliance:** Administered SQL Server on AWS RDS with scheduled backups and query tuning. Oversaw SSL/TLS certificates, DNS (Route 53), IAM least-privilege policies, and KMS encryption for sensitive data.
- **Serverless & Cost Optimization:** Deployed hybrid architecture with AWS Lambda alongside EKS-hosted services. Reduced AWS spend through autoscaling, scheduled non-prod shutdowns, resource tagging, and instance right-sizing.
- **Cross-Team Collaboration:** Worked closely with backend, frontend, and mobile developers to debug deployment failures, resolve environment-specific issues, and onboard new services into the CI/CD and infrastructure pipeline.

- **AI-Powered Code Review:** Integrated AI-driven PR review tooling into GitHub Actions workflows to automatically detect bugs, code smells, security vulnerabilities, and suggest refactors before merging - improving code quality and reducing review turnaround time.

Wenable Technologies Pvt. Ltd
DevOps Engineer

Hyderabad, Telangana, India
11/2023 - Present

Wenable Technologies develops **WeGuard**, an Android Enterprise Recommended EMM platform. Recognized as a Google Gold Partner, WeGuard focuses on enterprise-grade security, scalability, and device lifecycle management for large Android device fleets.

- **Cloud Infrastructure & IaC:** Engineered AWS infrastructure using Terraform and CloudFormation, standardized AMI builds across Kubernetes (EKS) clusters hosting containerized services.
- **New Infrastructure Provisioning:** Designed and deployed infrastructure for new services from scratch - creating VPCs, subnets, security groups, RDS instances, S3 buckets, and EKS namespaces. Onboarded new microservices into the platform with Helm charts, Dockerfiles, and CI/CD pipelines.
- **Kubernetes & Platform Engineering:** Architected and operated EKS clusters for multi-language services (Java, Golang, Python, .NET). Applied Helm charts and ArgoCD for GitOps-driven, zero-downtime deployments.
- **Microservices Segregation:** Segregated API and consumer layers for microservices, separating request-handling endpoints from background workers and event consumers. Coordinated backend and infrastructure changes - provisioning new deployments, services, and independent scaling policies for each layer. Leveraged GenAI tools to accelerate code refactoring, Helm chart generation, and pipeline updates during the restructuring.
- **SCM Migration:** Led the complete migration from Bitbucket to GitHub - transitioning all repositories, branch policies, and CI/CD workflows from Bitbucket Pipelines to GitHub Actions with zero disruption to 15+ developers.
- **CI/CD & Build Automation:** Designed pipelines using Bitbucket Pipelines, Dockerfiles, and Bitrise for mobile builds. Integrated with ArgoCD and Jenkins for continuous delivery across all environments.
- **Production Deployments:** Managed day-to-day production releases, rollbacks, and hotfix deployments across dev, staging, and production. Coordinated release cycles with development teams and maintained deployment runbooks.
- **Autoscaling & Resilience:** Configured Karpenter-driven autoscaling with Nops for resource efficiency and fault tolerance. Supported disaster recovery planning and HA deployment patterns for production services.
- **Log Management & Graylog Administration:** Maintained and operated Graylog clusters for centralized log aggregation - configured streams, pipelines, extractors, and retention policies. Set up alert conditions for error patterns and performance anomalies across all services.
- **Monitoring & Observability:** Established monitoring using AWS CloudWatch, Prometheus, and Grafana; integrated Loki and OpenSearch for faster incident triage and root cause analysis.
- **Incident Response & On-Call:** Responded to production incidents, performed root cause analysis, and implemented fixes. Collaborated with developers to debug application-level issues in Kubernetes pods, containers, and service meshes.
- **Security, DNS & Networking:** Systematized SSL/TLS lifecycle with cert-manager, directed DNS via Route 53 and Cloudflare, configured Nginx Ingress Controllers and AWS ALB/NLB for secure ingress and traffic routing.
- **Database Operations:** Maintained MySQL, MongoDB, and Redis caching; executed backup/restore procedures, migration scripts, and caching strategies for performance improvements.
- **Automation & Scripting:** Authored scripts in Bash, Python, and Golang for provisioning, certificate monitoring, and scheduled maintenance tasks.
- **Cross-Team Support:** Provided DevOps support to backend, frontend, and mobile teams - troubleshooting build failures, environment issues, and deployment blockers. Onboarded new developers to CI/CD workflows and infrastructure access.
- **AI-Powered PR Review:** Implemented AI-based pull request review automation across repositories to flag bugs, security leaks, code duplication, and architectural issues before merge. Reduced manual review overhead and caught vulnerabilities early in the development cycle.
- **GenAI Integration:** Leveraged AI tools for pipeline generation, log debugging, and documentation - reducing setup time and accelerating delivery cycles.

Projects

E-KYC using Blockchain

Ethereum, Metamask, Web3.js

- Developed a decentralized KYC verification system using Ethereum blockchain for immutable record keeping.
- Integrated Metamask for secure wallet authentication and Web3.js for smart contract interaction.
- Eliminated redundant verification processes and enhanced data privacy through decentralization.

Rubik's Cube Solver using AI/ML

Flask, Flutter, Dart, Machine Learning

- Built a cross-platform mobile application for real-time Rubik's cube state recognition and solving.
- Developed ML backend with Flask for cube state detection and algorithm-based solving.
- Delivered step-by-step visual solving instructions across both iOS and Android platforms using Flutter.

Early Trainings & Internships

- **AWS Academy** - Cloud Computing (Remote training during college)
- **Red Hat Linux** - Linux Administration (Remote training during college)
- **Wenable Technologies** - On-site Internship (Pre-placement, transitioned to full-time DevOps role)

Education

Vignana Bharathi Institute of Technology
Bachelor of Technology in Information Technology

Hyderabad, Telangana, India
08/2019 - 06/2023

Certifications

- **AWS Certified Cloud Practitioner** - Foundational AWS cloud concepts, billing, pricing, and core services.
- **AWS Cloud Architecture Certification** - Designing and implementing scalable, highly available infrastructure on AWS.
- **Cisco CCNA Certification** - Networking fundamentals, IP connectivity, routing, switching, and security essentials.

Key Achievements

- Successfully migrated legacy on-prem workloads to AWS cloud, reducing deployment time.
- Led SCM migration from Bitbucket to GitHub with zero disruption to developers.
- Reduced AWS cloud costs through autoscaling, right-sizing, and governance policies.
- Concurrently managing DevOps for two products across different domains (enterprise mobility and fleet management).
- Built and maintained EKS clusters running with containerized services in production.
- Established end-to-end observability stacks reducing incident resolution time across both products.
