

# KALI SAIKIRAN

DevOps Engineer | Cloud & Platform Engineer

[✉ saikiran2k25@gmail.com](mailto:saikiran2k25@gmail.com)   [☎ +91-9160382920](tel:+91-9160382920)   [🐙 github.com/Kali-25](https://github.com/Kali-25)  
[in linkedin.com/in/saikiran2k25](https://www.linkedin.com/in/saikiran2k25)   [🌐 saikiran.cloud](https://saikiran.cloud)   📍 Hyderabad, Telangana, India

## Professional Summary

DevOps Engineer with 2+ years of hands-on experience automating cloud infrastructure through Python, Go, and IaC (Terraform, Ansible, CloudFormation) across two concurrent production products. Designed and maintained CI/CD pipelines, managed multi-environment release promotion workflows, and led on-prem to AWS cloud migrations that significantly reduced deployment times and operational overhead. Skilled in container orchestration (Docker, Kubernetes/EKS), GitOps (ArgoCD, Helm), and full-stack observability (Prometheus, Grafana, ELK Stack, Graylog). Consistent track record of reducing cloud costs through autoscaling, right-sizing, and governance policies. Leverages AI tooling (Claude, Gemini) to enhance development efficiency and accelerate day-to-day engineering workflows.

## Technical Skills

- **Cloud Platforms:** AWS (primary - EC2, S3, Lambda, EKS, RDS, Route 53, CloudWatch, IAM, KMS), Azure, GCP
- **Infrastructure as Code:** Terraform (modules, remote state), Ansible, CloudFormation (nested stacks)
- **Containerization & Orchestration:** Docker (multi-stage builds), Kubernetes (EKS), Helm, ArgoCD, Karpenter, KEDA
- **CI/CD & Automation:** Jenkins (shared libraries), GitHub Actions (reusable workflows, OIDC), Bitbucket Pipelines, Bitrise, AWS CodePipeline
- **Monitoring & Logging:** AWS CloudWatch, Prometheus (custom exporters), Grafana (dashboards, alerting), ELK Stack, Graylog, Loki, OpenSearch
- **Programming & Scripting:** Bash, Python, Golang, Shell
- **Databases & Caching:** MySQL, MongoDB, PostgreSQL, Redis, Microsoft SQL Server (SSMS), AWS RDS
- **Messaging & Queuing:** Amazon SQS, RabbitMQ
- **Networking & Security:** VPC (subnets, NAT, IGW), ALB/NLB, DNS, SSL/TLS, IAM, KMS, Nginx, Traefik, Cert Manager
- **Operating Systems:** Linux (Ubuntu, RHEL, CentOS), macOS, Windows Server
- **GenAI & Developer Tools:** Factory.ai, Augment, Claude, Gemini, Warp Terminal

## Professional Experience

**Wenable Technologies Pvt. Ltd**  
DevOps Engineer

Hyderabad, Telangana, India  
11/2023 - Present

*Managing cloud infrastructure, CI/CD, and platform engineering for two concurrent products — WeGuard (enterprise mobility) and Apollo ELD (fleet management) — delivering reliable, efficient, and scalable cloud solutions for developers and clients alike.*

- **Cloud & Kubernetes:** Engineered AWS infrastructure using Terraform and CloudFormation across multiple EKS clusters hosting containerized services. Operated multi-language platforms (Java, Golang, Python, .NET) with Helm and ArgoCD for GitOps-driven deployments.
- **CI/CD & Release Management:** Built and maintained CI/CD pipelines using GitHub Actions, Jenkins, Bitbucket Pipelines, and Bitrise (mobile). Managed multi-environment release promotion workflows across dev, QA, staging, and production. Automated provisioning, certificate monitoring, and maintenance tasks with Bash, Python, and Golang scripts.
- **Migrations & Modernization:** Led SCM migration from Bitbucket to GitHub with zero developer disruption. Migrated legacy on-prem architectures to cloud-provisioned, containerized deployments on AWS EKS — modernizing the entire delivery workflow.
- **Monitoring & Incident Response:** Established full observability with Prometheus, Grafana, CloudWatch, and centralized logging (Loki, Graylog, OpenSearch). Responded to production incidents with root cause analysis and cross-team debugging.
- **Security & Networking:** Managed SSL/TLS lifecycle with cert-manager, DNS via Route 53 and Cloudflare, and ingress routing through Nginx, Traefik, and AWS ALB/NLB. Enforced IAM least-privilege policies and KMS encryption.
- **Database & Cost Optimization:** Administered MySQL, MongoDB, PostgreSQL, Redis, and SQL Server on RDS. Reduced cloud spend through Karpenter autoscaling, scheduled shutdowns, and instance right-sizing. Deployed Lambda-based scheduled batch workflows and hybrid serverless architectures alongside EKS services.
- **Frontend & Web Deployments:** Automated frontend deployments to AWS S3 and CloudFront with CI/CD-triggered cache invalidation and Route 53 DNS routing. Provisioned and managed containerized web applications within EKS alongside backend microservices.

- **Collaboration & GenAI:** Provided DevOps support across backend, frontend, and mobile teams. Leveraged AI tools to accelerate troubleshooting, documentation, and code review workflows — improving overall team delivery speed.

## Projects

---

**WeGuard — EMM Platform***EKS, ArgoCD, Terraform, Karpenter, Graylog, GitHub Actions, Helm, SQS, KEDA, MongoDB*

- Managed multiple EKS clusters hosting microservices across Java, Golang, Python, and .NET stacks.
- Led migration from Bitbucket to GitHub — transitioning all repos, branch policies, and CI/CD workflows with zero downtime.
- Architected GitOps pipelines with ArgoCD and Helm for zero-downtime deployments across environments.
- Configured Karpenter-driven autoscaling with Nops for cost-efficient node provisioning and fault tolerance.
- Administered Graylog clusters for centralized log aggregation — streams, pipelines, extractors, and alert conditions.
- Migrated message queuing from RabbitMQ to Amazon SQS and implemented KEDA-based autoscaling for event-driven consumer scaling.
- Set up infrastructure for Tolgee (self-hosted localization platform) — enabling i18n workflows for the team.
- Segregated API and consumer layers for microservices with independent scaling policies.
- Maintained MongoDB, PostgreSQL, and Redis with backup/restore procedures and caching strategies.
- Automated frontend deployments to AWS S3 and CloudFront with CI/CD-driven cache invalidation, and managed containerized web applications on EKS.

**Apollo ELD — Fleet Compliance Platform***Docker, GitHub Actions, Bitrise, Lambda, SQL Server, Terraform, Nominatim, E*

- Migrated legacy on-prem workloads to AWS, containerized the full application stack with Docker, and transitioned deployments to EKS.
- Deployed Nominatim as a self-hosted geocoding service on AWS for location-based features — handling data imports, resource optimization, and ingress configuration.
- Built CI/CD pipelines using GitHub Actions for backend services and Bitrise for iOS/Android mobile builds.
- Deployed Lambda-based scheduled batch workflows and hybrid serverless architectures alongside EKS-hosted services.
- Administered SQL Server and Redis on AWS RDS with scheduled backups, query tuning, and encryption.
- Provisioned and maintained isolated environments (dev, staging, QA, production) with consistent Terraform modules.
- Integrated AI-driven PR review tooling into GitHub Actions to detect bugs and vulnerabilities before merging.

## Early Trainings & Internships

---

- **AWS Academy** - Cloud Computing (Remote training during college)
- **Red Hat Linux** - Linux Administration (Remote training during college)
- **Wenable Technologies** - On-site Internship (Pre-placement, transitioned to full-time DevOps role)

## Education

---

**Vignana Bharathi Institute of Technology**  
*Bachelor of Technology in Information Technology*

Hyderabad, Telangana, India  
*08/2019 - 06/2023*

## Certifications

---

- **AWS Certified Cloud Practitioner** - Foundational AWS cloud concepts, billing, pricing, and core services.
- **AWS Cloud Architecture Certification** - Designing and implementing scalable, highly available infrastructure on AWS.
- **Cisco CCNA Certification** - Networking fundamentals, IP connectivity, routing, switching, and security essentials.

## Key Achievements

---

- Successfully migrated legacy on-prem workloads to AWS cloud, reducing deployment time by 50%.
- Led complete SCM migration from Bitbucket to GitHub with zero disruption to developers.
- Reduced AWS cloud costs by 25% through autoscaling, right-sizing, and governance policies.
- Concurrently managing platform engineering and DevOps for two enterprise products across different domains.
- Established end-to-end full observability stacks using Prometheus, Grafana, Graylog, and Loki.
